ABOUT ME

Full-stack Sr. Software Engineer with 3.9 years building production-scale logistics and healthcare platforms. Led frontend team, shipped apps handling 1.5 lakh daily orders, and delivered end-to-end solutions across Flutter, React, Node.js, and Python.

SKILLS

• Node.js • Firebase • Typescript • Zustand • Flutter • Python • Supabase • HTML/CSS • SQL
• Dart • Git/Github • BLOC • Provider • MongoDB • JAVA • API integration • Javascript • Postgresql

AI TOOLS

• Claude-code • Antigravity • Codex • Cursor • Other GPTs like chat gpt and gemini

WORK EXPERIENCE

BotAi Solutions Sr. Software Engineer • June 2024 - Present

I am placed at client location for the whole time - **Shree Maruti Integrated Logistics** (SMILe)

1. Courier Booking Portal - Blazepost [Web Link](#)

Blaze post is website for their channel partner who d booking courier shipments for their business and routes all the deliver to shree maruti. In blaze post we are handling **1.5 lakh order** on daily basis.

I have front website and also contributed to backend and team management. Front end development is owned by me and i also developed service like pincode management, rate calculation and guiding and management of other team members as well.

Key features:

- **Authentication, Order booking, Tracking, Reporting, Client onboarding, User onboarding, Reports, Rate cards, E-way bill, OCR booking, Wallet, DRS, PRS.**

2. SMILe CP - [Android App](#) [IOS App](#)

This is the mobile version of blaze-post completely owned and managed by me. This app is build in **flutter**

Key features:

- **Authentication, Order booking, Tracking, User onboarding, Reports, E-way bill, OCR booking,**

3. Silent printing feature

In normal printing a window pops and then we can print with some selection. But here i have implement a silent sticker printing feature whenever they punch a order in the website. Then website **silently print lable stickers** for that shipment.

I have implemented using ZPL(**Zebra printing language**). I have create a template sticker in zpl and whenever booking punched that **thermal printer** gets triggered with that template

4. API RAG System - Feature

II have build a RAG system for API docs using **N8N**. I created two workflow in **N8N** one for embedding the chunks in **pinecone vetor DB** and other one is for interacting with AI. A webhook triggers then workflow calls the same vectore DB and **AI model** i have added two models **Gemini** and **grok's model**

3. Prayog SAAS Platform [Web Link](#)

This is a SAAS logistics platform for the organisation who don't have tech and who want to automate their operations.

I am **responsible for leading the front-end** development and handling front-end team which is about 5 developers. Also **responsible for guiding and pseudo management of backend and team**. I am working in all part from front-end, back-end and also **involved in product managment and planning with management and leaders**.

I have created a full **COD management system** where user can book COD order for any partner and get settled with the same partenrs as well. With webhook integration, excel upload or lastly manually.

This systeme build in **React js, Python, NodeJs, GoLang, PostgreSQL** in the backed and hosted in the **AWS**

Key features:

- **Authentication with RBAC(Role based access control), White labeling with theme and logos, Custom Domain, multiple delivery partner integration, Rate card customisations, Booking, Tracking, Last mile delivery, Partner-wise serviceability, Billing , financing and wallets, User activity tracking, Label - invoice configurations, Franchise onboarding with their customisation and settings**

Anjita It Solution Flutter Developer • July 2023 - Present

As a flutter developer my task is mainly **develop** and **maintain** the apps in flutter. **Handling clients query**, Creating **API structure** and **database structure**, research and development out of flutter is my part of job.

1. Health parliament [Play store link](#) [App Store Link](#)

Health parliament is app developed for medical professionals. In this app users from medical related fields can create account and explore a new way to connect other medical professional.

Key features:

- Custom Authentication (Email verification) , Creating Community (PDF), Chatting , Log In/Sign In , Like/Comment/Share, Payment Integration (Razor pay), Blogs /News , Surveys , Profile privacy set visibility for sensitive data, Blocking account, tagging, Notification

2. Humrahi [Play store link](#) [App Store Link](#)

This app for focused for diabetics patients in this they can login and track blood sugar level , have diet plans, upload reports for doctors.

Key features:

- Custom Authentication (OTP Verification), Graph representation of all the data, Step count from google-fit, BMI calculator , Blogs, Upload reports, Create PDF, Track blood sugar level, Profile, Appointment with doctors, Localization, Push notification

3. SWASTIK [Play store link](#)

SWASTIK is custom app for a wellbeing center. This app include all before check-In, Checked In and after check Out phase.

Key features:

- Before Check-In: Details of check-in, Medical test and Report generation tracking, Questionnaire, Generate E-Pass, Virtual Signature
- Checked-In: Full schedule of Events and schedule tracking, Journal for notes, Custom Music Library for songs, Chat with doctor, Help desk
- Common features: Log-In with id password or OTP verification, Push Notifications, Account Deletion, Saving Notification.

Contributions in other projects and Prototypes

- SHE - An app for pregnant women. SHE provides health guidelines, QNA, Polls, notification features [Play store link](#) [App Store Link](#)
- Patient’s Union - App for patient for sharing their experiences and opinions on community forums. [Play store link](#) [App Store Link](#)
- Chat with Documents - An AI chatbot where you upload the document and ask any question AI will read and understand document for you and give answer and if question is out scope of document AI will handles that also. Build with Python, Lanchain, LLama2 13B Model and fast API
- LMS In App - An learning model system in build with Flutter WebView (SCORM only works in browser), JavaScript, XAPI, SCORM. In user can see courses and also download courses. Also all the data tracking is getting registered in the backend
- CAB Tracking - User enter address and a polyline gets plotted on the map and when cab starts to move then cab marker on map moves by smooth animation and plotted polylines also gets erased as cab moves. Build with Flutter, Google Map, Socket.io, Node.js

Touchzing Media PVT LTD Software Developer • August 2022 - July 2023

As a flutter developer my task is mainly develop apps from scratch and update and fixing in production app.

- Daily Journal - An app for write notes and read quotes like a scrap book build with flutter and hive [Play store link](#)
- Numerology - An app tell about numerology, zodiac sign, in different language build with flutter and SQLFLite [Play store link](#) [App Store Link](#)
- Also worked in apps like Birthday Wishes, Poems, Palm Reading which are developed with SQL-Lite flutter. They include features like In-App purchase, sharing message, saving image, localizations, About astrology, Chat GPT integration, etc.

MY PROJECTS

- Stargaze - A open source observability platform where any can pull my repo and spin full system by just one command. In start gaze they can see api logs, metrics and integrate tools like Email, Discord, Slack , Teams and pager duty .This system have RBAC, User management, API keys, and setting and customisation This is build with reactjs, Postgres, NestJs, Docker, Kafka. [Github-Repo](#)
- Un-Secret - A social media includes post, likes, share, chat, video calling (Zego-cloud) feature. Build with Flutter, Bloc, at front end. In the backend Mongo-DB and Node.js with Socket.io API hosted on vercel. [Github-Repo](#)
- Alphabet Animation - A package published on pub.dev to animation every single alphabets of a word. [Pub.dev Link](#)
- Small Solution - An app where small workers like plumber, carpenter, etc. register themselves and gets hired by user who want by connecting with worker with direct call or in Chat build in Java, XML, Firebase. Includes search by category, Call history, chat history, log-In as worker or recruiter features [Github-Repo](#)

EDUCATION

Bachelors in Information and Technology 2019-2022
Nirmala Memorial Foundation College (Kandivali-Mumbai) 9.1 CGPI

LEARNINGS

- Team Management
- Project Structure
- Security of app/websites
- Project leading and development
- Decision making
- Handling large data with paginations
- Authentication
- Handling project scratch to production
